## Compiler Laboratory: CS39003

3rd year CSE, 5th semester

Assignment - 3: Lexer and Parser

Marks: 100

Assign Date: Aug 09, 2017

Submit Date: 23:55, Sep 05, 2017

## 1 Preamble - miniMatlab

This assignment follows the lexical and phrase structure grammar specification of a new language named **miniMatlab** which makes use of the **International Standard ISO/IEC 9899:1999 (E)** to support basic arithmetic and matrix operations. The lexical and phrase structure grammar specification quoted here is written using a precise yet compact notation typically used for writing language specifications. We first outline the notation and then present the Lexical and Phrase Structure Grammar that we shall work with.

## 2 Notation

In the syntax notation used here, syntactic categories (non-terminals) are indicated by italic type, and literal words and character set members (terminals) by **bold type**. A colon (:) following a non-terminal introduces its definition. Alternative definitions are listed on separate lines, except when prefaced by the words "one of". An optional symbol is indicated by the subscript "opt", so that the following indicates an optional expression enclosed in braces.

$$\{expression_{opt}\}$$

### 3 Lexical Grammar for miniMatlab

#### 1. Lexical Elements:

*token:*

*keyword*

*identifier*

*constant*

*string-literal*

*punctuator*

#### 2. Keywords:

*keyword: one of*

<b>unsigned</b>	<b>break</b>	<b>return</b>	<b>void</b>
<b>case</b>	<b>float</b>	<b>short</b>	<b>char</b>
<b>for</b>	<b>signed</b>	<b>while</b>	<b>goto</b>
<b>Bool</b>	<b>continue</b>	<b>if</b>	<b>default</b>
<b>do</b>	<b>int</b>	<b>switch</b>	<b>double</b>
<b>long</b>	<b>else</b>	<b>Matrix</b>	

#### 3. Identifiers:

*identifier:*

*identifier-nondigit*

*identifier identifier-nondigit*

*identifier digit*

*identifier-nondigit: one of*

-	a	b	c	d	e	f	g	h	i	j	k	l	m
	n	o	p	q	r	s	t	u	v	w	x	y	z
	A	B	C	D	E	F	G	H	I	J	K	L	M
	N	O	P	Q	R	S	T	U	V	W	X	Y	Z

*digit: one of*

**0 1 2 3 4 5 6 7 8 9**

#### 4. Constants:

*constant:*

*integer-constant*

*floating-constant*

*character-constant*

*zero-constant*

*zero-constant:*

**0**

*integer-constant:*

*nonzero-digit*

*integer-constant digit*

*nonzero-digit: one of*

**1 2 3 4 5 6 7 8 9**

*floating-constant:*

*fractional-constant exponent-part<sub>opt</sub>*  
*digit-sequence exponent-part*

*fractional-constant:*

*digit-sequence<sub>opt</sub> . digit-sequence*  
*digit-sequence .*

*exponent-part:*

*e sign<sub>opt</sub> digit-sequence*  
*E sign<sub>opt</sub> digit-sequence*

*sign: one of*

*+ -*

*digit-sequence:*

*digit*  
*digit-sequence digit*

*character-constant:*

*'c-char-sequence'*

*c-char-sequence:*

*c-char*  
*c-char-sequence c-char*

*c-char:*

*any member of the source character set except the single-quote ' , backslash \ , or  
new-line character*  
*escape-sequence*

*escape-sequence:*

*\' \\" \? \\*  
*\a \b \f \n \r \t \v*

## 5. String Literals:

*String Literal:*

*"s - char - sequence<sub>opt</sub>"*

*s-char-sequence:*

*s-char*  
*s-char-sequence s-char*

*s-char:*

*any member of the source character set except the double-quote " , backslash \ , or  
new-line character*  
*escape-sequence*

## 6. Punctuators:

*punctuator: one of*

**[] () {} . - >**

++ -- & \* + - ~ !  
 / % << >> < > <= >= == != ^ | && ||  
 ? : ;  
 = \*= /= %= += -= <<= >>= &= ^= |=  
 , # '

## 7. Comments:

### (a) Multi-line Comments

Except within a character constant, a string literal, or a comment, the characters `/*` introduce a comment. The contents of such a comment are examined only to identify multibyte characters and to find the characters `*/` that terminate it. Thus, `/* ... */` comments do not nest.

### (b) Single-line Comments

Except within a character constant, a string literal, or a comment, the characters `//` introduce a comment that includes all multibyte characters up to, but not including, the next new-line character. The contents of such a comment are examined only to identify multibyte characters and to find the terminating new-line character.

## 4 Phrase Structure Grammar for miniMatlab

### 1. Expressions

*primary-expression:*

*identifier*

*constant*

*string-literal*

*(expression)*

*postfix-expression:*

*primary-expression*

*postfix-expression* [ *expression* ]

*postfix-expression* ( *argument-expression-list*<sub>opt</sub> )

*postfix-expression* . *identifier*

*postfix-expression* - > *identifier*

*postfix-expression* ++

*postfix-expression* --

*postfix-expression* . '

*argument-expression-list:*

*assignment-expression*

*argument-expression-list* , *assignment-expression*

*unary-expression:*

*postfix-expression*

++ *unary-expression*

-- *unary-expression*

*unary-operator* *cast-expression*

*unary-operator:* one of

& \* + -

*cast-expression:*

*unary-expression*

*multiplicative-expression:*

*cast-expression*

*multiplicative-expression* \* *cast-expression*

*multiplicative-expression* / *cast-expression*

*multiplicative-expression* % *cast-expression*

*additive-expression:*

*multiplicative-expression*

*additive-expression* + *multiplicative-expression*

*additive-expression* - *multiplicative-expression*

*shift-expression:*

*additive-expression*

*shift-expression* << *additive-expression*

*shift-expression* >> *additive-expression*

*relational-expression:*

*shift-expression*

*relational-expression* < *shift-expression*  
*relational-expression* > *shift-expression*  
*relational-expression* <= *shift-expression*  
*relational-expression* >= *shift-expression*  
*equality-expression*:  
*relational-expression*  
*equality-expression* == *relational-expression*  
*equality-expression* != *relational-expression*  
*AND-expression*:  
*equality-expression*  
*AND-expression* & *equality-expression*  
*exclusive-OR-expression*:  
*AND-expression*  
*exclusive-OR-expression* ^ *AND-expression*  
*inclusive-OR-expression*:  
*exclusive-OR-expression*  
*inclusive-OR-expression* | *exclusive-OR-expression*  
*logical-AND-expression*:  
*inclusive-OR-expression*  
*logical-AND-expression* && *inclusive-OR-expression*  
*logical-OR-expression*:  
*logical-AND-expression*  
*logical-OR-expression* || *logical-AND-expression*  
*conditional-expression*:  
*logical-OR-expression*  
*logical-OR-expression* ? *expression* : *conditional-expression*  
*assignment-expression*:  
*conditional-expression*  
*unary-expression* *assignment-operator* *assignment-expression*  
*assignment-operator*: one of  
= \* = / = % = + = - = <<= >>= & = ^ = | =  
*expression*:  
*assignment-expression*  
*expression* , *assignment-expression*  
  
*constant-expression*:  
*conditional-expression*

## 2. Declarations

*declaration*:  
*declaration-specifiers* *init-declarator-list*<sub>opt</sub> ;  
*declaration-specifiers*:

*type-specifier declaration-specifiers*<sub>opt</sub>  
*init-declarator-list:*  
     *init-declarator*  
     *init-declarator-list, init-declarator*  
*init-declarator:*  
     *declarator*  
     *declarator = initializer*  
*type-specifier:*  
     ***void***  
     ***char***  
     ***short***  
     ***int***  
     ***long***  
     ***float***  
     ***double***  
     ***Matrix***  
     ***signed***  
     ***unsigned***  
     ***Bool***  
*declarator:*  
     *pointer*<sub>opt</sub> *direct-declarator*  
*direct-declarator:*  
     *identifier*  
     (*declarator*)  
     *direct-declarator* [ *assignment-expression*<sub>opt</sub> ]  
     *direct-declarator* ( *parameter-type-list* )  
     *direct-declarator* ( *identifier-list*<sub>opt</sub> )  
*pointer:*  
     \* *pointer*<sub>opt</sub>  
*parameter-type-list:*  
     *parameter-list*  
*parameter-list:*  
     *parameter-declaration*  
     *parameter-list* , *parameter-declaration*  
*parameter-declaration:*  
     *declaration-specifiers declarator*  
     *declaration-specifiers*  
*identifier-list:*  
     *identifier*  
     *identifier-list* , *identifier*  
*initializer:*  
     *assignment-expression*  
     { *initializer-row-list* }  
*initializer-row-list:*  
     *initializer-row*

*initializer-row-list ; initializer-row*  
*initializer-row:*  
     *designation<sub>opt</sub> initializer*  
     *initializer-row, designation<sub>opt</sub> initializer*  
*designation:*  
     *designator-list =*  
*designator-list:*  
     *designator*  
     *designator-list designator*  
*designator:*  
     [ *constant-expression* ]  
     . *identifier*

### 3. Statements

*statement:*  
     *labeled-statement*  
     *compound-statement*  
     *expression-statement*  
     *selection-statement*  
     *iteration-statement*  
     *jump-statement*  
*labeled-statement:*  
     *identifier : statement*  
     **case** *constant-expression : statement*  
     **default** : *statement*  
*compound-statement:*  
     { *block-item-list<sub>opt</sub>* }  
*block-item-list:*  
     *block-item*  
     *block-item-list block-item*  
*block-item:*  
     *declaration*  
     *statement*  
*expression-statement:*  
     *expression<sub>opt</sub> ;*  
*selection-statement:*  
     **if** ( *expression* ) *statement*  
     **if** ( *expression* ) *statement* **else** *statement*  
     **switch** ( *expression* ) *statement*  
*iteration-statement:*  
     **while** ( *expression* ) *statement*  
     **do** *statement* **while** ( *expression* ) ;  
     **for** ( *expression<sub>opt</sub> ; expression<sub>opt</sub> ; expression<sub>opt</sub>* ) *statement*  
     **for** ( *declaration expression<sub>opt</sub> ; expression<sub>opt</sub>* ) *statement*

*jump-statement:*  
    **goto** *identifier* ;  
    **continue** ;  
    **break** ;  
    **return** *expression*<sub>opt</sub> ;

#### 4. External definitions

*translation-unit:*  
    *external-declaration*  
    *translation-unit external-declaration*  
*external-declaration:*  
    *function-definition*  
    *declaration*  
*function-definition:*  
    *declaration-specifiers declarator declaration-list*<sub>opt</sub> *compound-statement*  
*declaration-list:*  
    *declaration*  
    *declaration-list declaration*

## 5 The Assignment

1. Write a flex specification for the language of **miniMatlab** using the lexical grammar specified in Section 3. Name your .l file as `ass3_YourRollNo.l`. Use this specification to generate `lex.yy.c`. **Marks: 30**
2. Write a Bison specification for the language of **miniMatlab** using the phrase structure grammar specified in Section 4. Name your .y file as `ass3_YourRollNo.y`. Use this specification to generate `y.tab.c`. **Marks: 35**

While writing the Bison specification, you may need to make some changes to the grammar. For example, some non-terminals like `argument-expression-listopt` are shown as optional on the right-hand-side as:

*postfix-expression:*

`postfix-expression ( argument-expression-listopt )`

One way to handle them (you may come up with your own method) would be to introduce a new non-terminal, `argument-expression-list-opt`, and a pair of new productions:

*argument-expression-list-opt:*

`argument-expression-list`

`ε`

and change the above rule as:

*postfix-expression:*

`postfix-expression ( argument-expression-list-opt )`

3. Create a file named `ass3_YourRollNo_lexer.c` containing the `main()` function to test your lexer. This `main()` function should generate the output token stream when given a lexically correct code of **miniMatlab** as input and should return failure otherwise. Use the stdout for printing the token stream/failure message. **Marks: 5**

*Hint:* You may consider using `yylex()` here.

4. Create a file named `ass3_YourRollNo_parser.c` containing the `main()` function to test your parser. This `main()` function should generate the derivation rules when given a syntactically correct code of **miniMatlab** as input and should return failure otherwise. Use the stdout for printing the derivation rules/failure message. Please note that the .l and .y files should not contain the function `main()`. **Marks: 5**

*Hint:* You may consider using `yyparse()` here.

5. Prepare a Makefile for compiling the specifications and generating the lexer and the parser. First generate `lex.yy.c` from your .l file, `y.tab.c` using your .y file and then use these two along with the .c files to generate the binaries. **Marks: 5**

*Hint:* You may consider creating two different binaries, one from lex.yy.c, \_lexer.c & y.tab.c and another from lex.yy.c, \_parser.c & y.tab.c.

6. Test your lexer and parser using the test files (ass3\_test\_1.mm and ass3\_test\_2.mm) provided along with this assignment. Generate output token stream and derivation rules corresponding to these test files. Save these outputs in files named ass3\_test\_1\_tokens\_YourRollNo, ass3\_test\_1\_dr\_YourRollNo, ass3\_test\_2\_tokens\_YourRollNo, and ass3\_test\_2\_dr\_YourRollNo. Make sure these outputs are as per the flex and Bison specification of **miniMatlab**. **Marks: 20**

**Marking scheme:** *Testing lexer and parser using supplied test files (5+5) and using TA's test files (5+5).*

Prepare a zip file named ass3\_YourRollNo.zip containing the following files: ass3\_YourRollNo.1, ass3\_YourRollNo.y, ass3\_YourRollNo\_lexer.c, ass3\_YourRollNo\_parser.c, Makefile, ass3\_test\_1\_tokens\_YourRollNo, ass3\_test\_1\_dr\_YourRollNo, ass3\_test\_2\_tokens\_YourRollNo, and ass3\_test\_2\_dr\_YourRollNo. Upload only ass3\_YourRollNo.zip to Moodle.

**Please ensure that the name of your files are strictly according to the supplied guidelines.**
